(54) Fabric bleaching composition

(57) A fabric bleaching composition comprising a peroxy compound and a specified manganese complex is disclosed, as well as a process for bleaching and/or

cleaning a fabric by contacting it with said fabric bleaching composition.

EP 0 693 550 A2

Description

The present invention relates to fabric bleaching compositions comprising a peroxygen compound and, as bleach activator, a manganese complex.

5 Bleaching compositions which contain a peroxide bleaching agent are well known. In such compositions, the bleaching agent functions to remove common domestic stains such as tea, coffee, fruit and wine stains from the soiled clothing at the boil. If the washing temperature is reduced to below 60°C., however, the efficacy of the bleaching agent is correspondingly reduced.

10 It is also well known that certain heavy metal ions, or complexes thereof, function to catalyse the decomposition of hydrogen peroxide, or of compounds which can liberate hydrogen peroxide, in order to render the peroxide compound effective at temperatures below 60°C.

For example, in US-A-5 114 611, there is described the activation of a peroxy compound by a complex of a transition metal (Mn, Co, Fe or Cu) with a non-(macro) cyclic ligand, preferably 2,2-bispyridylamine or 2,2-bispyridylmethane.

15 Moreover, in US-A-5 114 606, there is described a manganese complex, for use as a bleach catalyst for a peroxy compound, which is a water-soluble complex of manganese II, III or IV, or mixtures thereof, with a ligand which is a non-carboxylate polyhydroxy compound, having at least three consecutive C-OH groups in its molecular structure, preferably sorbitol.

20 Other disclosures, relating to the use of metal complexes as activators for peroxy compounds in bleaches or detergents, include US-A-5 227 084, US-A-5 194 416, US-A-4 728 455, US-A-4 478 733, US-A-4 430 243, EP-A-549 271, EP-A-549 272, EP-A-544 519, EP-A-544 490, EP-A-544 440, EP-A-509 787, EP-A-458 397 and EP-A-458 398.

25 It has now been found, surprisingly, that certain other manganese complexes are excellent bleach catalysts for peroxy compounds and, relative to known bleach catalysts, provide enhanced bleach effects at low wash temperatures (e.g. at 15 to 40°C.) and/or using shorter washing times.

Accordingly, the present invention provides a fabric bleaching composition comprising

25

a) a peroxy compound; and

30

b) 0.0005 to 0.5, preferably 0.005 to 0.05%, by weight of manganese, of one or more water-soluble manganese complexes having one of the formulae (1), (2), (3), (4), (5), (6), (7) (8), (9), (10), (11), (12), (13), (14), (15), (16), (17) or (18):

35

40

50

55

50

55

in which R₁, R₂, R₃ and R₄ are the same or different and each is hydrogen or optionally substituted alkyl, cycloalkyl or aryl; R₅ is hydrogen, optionally substituted alkyl, optionally substituted alkoxy, halogen, cyano, N(optionally substituted alkyl)₂, N[⊕] (optionally substituted alkyl)₃ or a water-solubilising group, especially SO₃M; R₆ and R₇ are the same or different and each is NH-CO-NH₂ a group of formula

or a group of formula

Y is optionally substituted alkylene or cyclohexylene; X is OH, NH₂, optionally substituted alkyl or optionally substituted aryl; n is 0, 1, 2 or 3; M is hydrogen, an alkali metal atom, ammonium or a cation formed from an amine; m is 2 or 3; q is 0, 1, 2 or 3; and A is an anion.

When one or more of R₁, R₂, R₃, R₄, R₅ and X are optionally substituted alkyl, preferred alkyl groups are C₁-C₁₂, especially C₁-C₄-alkyl groups. The alkyl groups may be branched or unbranched and may be optionally substituted, e.g. by halogen such as fluorine, chlorine or bromine, by C₁-C₄-alkoxy such as methoxy or ethoxy, by phenyl or carboxyl, by C₁-C₄-alkoxycarbonyl such as acetyl, or by a mono- or di-C₁-C₄alkylated amino group.

40 Optionally substituted alkoxy groups R_5 are preferably C_1 - C_8 , especially C_1 - C_4 -alkoxy groups. The alkoxy groups may be branched or unbranched and may be optionally substituted, e.g. by halogen such as fluorine, chlorine or bromine, by C_1 - C_4 -alkoxy such as methoxy or ethoxy, by phenyl or carboxyl, by C_1 - C_4 -alkoxycarbonyl such as acetyl, or by a mono- or di-alkylated amino group.

Halogen atoms R_5 are preferably bromo or, especially, chloro atoms.

45 N(optionally substituted alkyl)₂ groups R₅ are preferably N(optionally substituted C₁-C₄alkyl)₂ groups, especially N(methyl)₂ or N(ethyl)₂.

N^{\oplus} (optionally substituted alkyl)₃ groups R₅ are N $^{\oplus}$ (optionally substituted C₁-C₄alkyl)₃, especially N $^{\oplus}$ (methyl)₃ or N $^{\oplus}$ (ethyl)₃.

When one or more of R₁, R₂, R₃ and R₄ are cycloalkyl, this may also be substituted, e.g. by C₁-C₄-alkyl or C₁-C₄-alkoxy.

When one or more of R₁, R₂, R₃, R₄ and X are optionally substituted aryl, they are preferably a phenyl or naphthyl group which may be substituted by C₁-C₄-alkyl, e.g. by methyl, ethyl, propyl, isopropyl, butyl, isobutyl, sec.-butyl or

group which may be substituted by C₁-C₄-alkyl, e.g. by methyl, ethyl, propyl, isopropyl, butyl, isobutyl, sec.-butyl or tert.-butyl, by C₁-C₄-alkoxy such as methoxy, ethoxy, propoxy, isopropoxy, butoxy, isobutoxy, sec.-butoxy or tert.-butoxy, by halogen such as fluorine, chlorine or bromine, by C₂-C₅-alkanoylamino, such as acetylarnino, propionylarnino or butyrylarnino, by nitro, sulpho or by dialkylated amino.

When Y is alkylene, it is preferably a C₂-C₄-alkylene residue, especially a -CH₂-CH₂-bridge. Y may also be a C₂-C₈-alkylene residue which is interrupted by oxygen or, especially, by nitrogen, in particular the -(CH₂)₃-NH-(CH₂)₃-, -(CH₂)₂-NH-(CH₂)₂ or -(CH₂)₂-N(CH₃)-(CH₂)₂-bridge.

Anions A include halide, especially chloride, chlorate, sulphate, nitrate, hydroxy, methoxy, BF_4^- , PF_6^- , carboxylate,

especially acetate, triflate or tosylate.

With respect to the compounds of formula (1), preferably each R₁ is hydrogen, Y is the ethylene bridge and n is 2, whereby one sulpho group is preferably present in each benzene ring, especially in para position to the oxygen atom.

In relation to the compounds of formula (2), preferably R₂ is hydrogen and X is OH.

With respect to the compounds of formula (3), preferred compounds are those in which R₃ is hydrogen and R₄ is hydrogen, methyl or, especially, phenyl. Especially preferred compounds are those in which the SO₃M group is in para position to the oxygen atom.

With respect to the compounds of formula (4), preferred compounds are those in which R₁ is hydrogen, more especially those in which each SO₃M group is in para position to the respective oxygen atom.

10 As to the compounds of formula (5), (6), (7) and (8), preferably R₁ is hydrogen or methyl, q is 1, R₅ is hydrogen, methyl or SO₃Na and is preferably in p-position with respect to the oxygen atom, Y is -CH₂CH₂- or cyclohexylene and A is a chloride, chlorate, acetate, hydroxy, methoxy or PF₆ anion.

In relation to the compounds of formula (9), preferably R₆ and R₇ are the same. The preferred anion, when present, is acetate.

15 With respect to the compounds of formula (11) or (12), preferably R₁ is hydrogen, n is 0 and A is acetate.

In relation to the compounds of formula (13), preferably R₁ is hydrogen, m is 2 or 3 and A is acetate.

With respect to the compounds of formula (14), preferred compounds are those in which R₁ is hydrogen, m is 2 and A is Cl.

With respect to the compounds of formula (15), preferred compounds are those in which m is 2 and A is chloride.

20 As to the compounds of formula (16), preferably m is 2 and A is acetate.

In the compounds of formula (17), A is preferably perchlorate.

In each of the compounds of formula (1) to (18), it is preferred that they are used in neutral form, i.e. that M, when present, is other than hydrogen, preferably a cation formed from an alkali metal, in particular sodium, or from an amine.

Moreover, in each of the compounds of formula (1) to (4), (9), (10), (11), (12), (13), (14) and (18), the respective benzene rings may contain, in addition to any sulpho group, one or more further substituents such as C₁-C₄-alkyl, C₁-C₄-alkoxy, halogen, cyano or nitro.

The manganese complexes of formula (5) in which q is 2, 3 or 4 and those of formula (6), (7), (8) and (11) to (17) are believed to be new compounds and, as such, form a further aspect of the present invention. The compounds of formula (5) are described, at least in part in WO 93/03838. The compounds of formula (5), (6) and (10) to (18) may be produced by known methods, e.g. by the methods analogous to those disclosed in US Patent 4,655,785 relating to similar copper complexes. The compounds of formula (7) and (8) may be produced by oxidative coupling of the respective compound of formula (5) or (6).

The peroxy component a) of the fabric bleaching compositions of the present invention may be hydrogen peroxide, a compound which liberates hydrogen peroxide, a peroxyacid, a peroxyacid bleach precursor or a mixture thereof.

35 Compounds which liberate hydrogen peroxide are well known and include, e.g., inorganic compounds such as alkali metal peroxides, -perborates, -percarbonates, -perphosphates and -persulfates and organic compounds such as peroxy lauric acid, peroxybenzoic acid, 1,12-d peroxydodecanoic acid, diperoxyisophthalic acid and urea peroxide, as well as mixtures thereof. Sodium percarbonate and sodium perborate, in particular sodium perborate monohydrate, are preferred.

40 Peroxyacid compounds and peroxyacid bleach precursors are also well known and a summary of references describing them is provided in the above-mentioned US-A-5 114606.

Examples of peroxyacid bleach precursors include benz(4H)-1,3-oxazin-4-one derivatives, especially substituted 2-phenyl-benz(4H)-1,3-oxazin-4-one 2-(N,N,N-trimethyl ammonium) ethyl sodium-4-sulfophenyl carbonate chloride (SPCC) N-octyl,N,N-dimethyl-N10-carbophenoxy decylammonium chloride (ODC) 3-(N,N,N-trimethyl ammonium) propyl sodium 4-sulfophenyl carboxylate N,N,N-trimethyl ammonium toluyloxy benzene sulfonate sodium-4-benzoyloxy benzene sulfonate (SBOBS) N,N,N',N'-tetraacetyl ethylene diamine (TAED) sodium-1-methyl-2-benzoyloxy benzene-4-sulfonate sodium-4-methyl-3-benzoyloxy benzoate and sodium nonanoyloxybenzene sulfonate (NOBS). The substituted 2-phenyl-benz(4H)-1,3-oxazin-4-one, NOBS and TAED precursors are preferred.

45 Preferably, the amount of the peroxy compound in the fabric bleaching composition according to the invention ranges from 0.5 to 50%, especially from 2 to 20% by weight, based on the total weight of the composition.

The fabric bleaching compositions of the present invention preferably also comprises a surfactant and a detergent builder component.

The surfactant component is preferably an anionic surfactant, a nonionic surfactant or a mixture thereof and is preferably present in an amount of 5 to 50%, especially 5 to 25% by weight, based on the total weight of the fabric bleaching composition.

55 The anionic surfactant component may be, e.g., a sulphate, sulphonate or carboxylate surfactant, or a mixture of these.

Preferred sulphates are alkyl sulphates having 12-22 carbon atoms in the alkyl radical, optionally in combination

with alkyl ethoxy sulphates having 10-20 carbon atoms in the alkyl radical.

Preferred sulphonates include alkyl benzene sulphonates having 9-15 carbon atoms in the alkyl radical.

In each case, the cation is preferably an alkali metal, especially sodium.

Preferred carboxylates are alkali metal sarcosinates of formula R-CO(R¹)CH₂COOM¹ in which R is alkyl or alkenyl having 9-17 carbon atoms in the alkyl or alkenyl radical, R¹ is C₁-C₄ alkyl and M¹ is alkali metal.

The nonionic surfactant component may be, e.g., a condensate of ethylene oxide with a C₉-C₁₅ primary alcohol having 3-8 moles of ethylene oxide per mole.

The detergent builder component is preferably present in an amount of 5 to 80%, especially 10 to 60% by weight, based on the total weight of the fabric bleaching composition. It may be an alkali metal phosphate, especially a tripolyphosphate; a carbonate or bicarbonate, especially the sodium salts thereof; a silicate; an aluminosilicate; a polycarboxylate; a polycarboxylic acid; an organic phosphonate; or an aminoalkylene poly (alkylene phosphonate); or a mixture of these.

Preferred silicates are crystalline layered sodium silicates of the formula NaHSi_mO_{2m+1}.pH₂O or Na₂Si_mO_{2m+1}.pH₂O in which m is a number from 1.9 to 4 and p is 0 to 20.

Preferred aluminosilicates are the commercially-available synthetic materials designated as Zeolites A, B, X, and HS, or mixtures of these. Zeolite A is preferred.

Preferred polycarboxylates include hydroxypolycarboxylates, in particular citrates, polyacrylates and their copolymers with maleic anhydride.

Preferred polycarboxylic acids include nitrilotriacetic acid and ethylene diamine tetra-acetic acid.

Preferred organic phosphonates or aminoalkylene poly (alkylene phosphonates) are alkali metal ethane 1-hydroxy diphosphonates, nitrilo trimethylene phosphonates, ethylene diamine tetra methylene phosphonates and diethylene triamine penta methylene phosphonates.

The fabric bleaching compositions of the invention may contain, in addition to the components already mentioned, one or more of fluorescent whitening agents, such as a bis-triaziylamino-stilbene-disulphonic acid, a bis-triazoyl-stilbene-disulphonic acid, a bis-styryl-biphenyl, a bis-benzofuranyl biphenyl, a bis-benzoxaryl derivative, a bis-benzimidazoyl derivative, a coumarine derivative or a pyrazoline derivative; soil suspending agents, for example sodium carboxymethylcellulose; salts for adjusting the pH, for example alkali or alkaline earth metal silicates; foam regulators, for example soap; salts for adjusting the spray drying and granulating properties, for example sodium sulphate; perfumes; and also, if appropriate, antistatic and softening agents; such as smectite clays; enzymes, such as proteases, cellulases, lipases, oxidases and amylases; photobleaching agents; pigments; and/or shading agents. These constituents should, of course, be stable to the bleaching system employed.

A particularly preferred fabric bleaching composition co-additive is a polymer known to be useful in preventing the transfer of labile dyes between fabrics during the washing cycle. Preferred examples of such polymers are polyvinyl pyrrolidones, optionally modified by the inclusion of an anionic or cationic substituent, especially those having a molecular weight in the range from 5000 to 60,000, in particular from 10,000 to 50,000. Preferably, such polymer is used in an amount ranging from 0.05 to 5%, preferably 0.2-1.7% by weight, based on the weight of the detergent.

The formulation of the fabric bleaching compositions of the invention may be conducted by any conventional technique.

The fabric bleaching composition may be formulated as a solid; or as a non-aqueous liquid fabric bleaching composition, containing not more than 5, preferably 0-1 wt.% of water, and based on a suspension of a builder in a non-ionic surfactant, as described, e.g., in GB-A-2158454.

Preferably, the fabric bleaching composition is in powder or granulate form.

Such powder or granulate forms may be produced by firstly forming a base powder by spray-drying an aqueous slurry containing all the said components, apart from the components a) and b); then adding the components a) and b) by dry-blending them into the base powder. In a further process, the component b) may be added to an aqueous slurry containing the surfactant and builder components, followed by spray-drying the slurry prior to dry-blending component a) into the mixture. In a still further process, a nonionic component is not present, or is only partly present in an aqueous slurry containing anionic surfactant and builder components; component b) is incorporated into the nonionic surfactant component, which is then added to the spray-dried base powder; and finally component a) is dry-blended into the mixture.

The present invention also comprises a bleaching and/or cleaning process comprising contacting a fabric to be bleached and/or cleaned with an effective amount of a fabric bleaching composition according to the present invention. Preferably the amount of the fabric bleaching composition used is such that the amount of manganese complex b) provides from 0.001 to 100 ppm, preferably from 0.01 to 20 ppm of manganese in the bleaching and/or cleaning bath.

The following Examples serve to illustrate the invention; parts and percentages are by weight, unless otherwise stated.

Example 1

6g of ethylenediamine are dropped into a solution of 34.5g of 3-isopropylsalicylaldehyde in 500ml of ethanol over 1 hour at 60°C. Stirring is continued at 60°C. for a further 2 hours and the precipitate so formed is filtered off. There are obtained 34.5g of a yellow liquid compound having the formula:

corresponding to a yield of 98% of theory.

15 To 10.6g of the compound of formula (101) dissolved in 350ml of ethanol there are added 7.4g of manganese-(II)-acetate.4H₂O. The dark brown solution so produced is stirred at 65°C. for 3 hours and then evaporated to dryness. There are obtained 10.5g of the compound having the formula:

corresponding to a yield of 75% of theory.

Elemental analysis of the compound having the formula (102) and having the empirical formula C₂₄H₂₉MnN₂O₄. 0.8 3-isopropylsalicylaldehyde gives:

30 Req.% C 64.47; H 6.48; N 4.70; Mn 9.23.

Found% C 64.5; H 6.7; N 5.0; Mn 9.46.

Example 2

Using the procedure described in Example 1 but with appropriate modification of the salicylaldehyde starting material, the compound of formula:

45 is obtained as a dark brown product in a yield of 91% of theory.

Elemental analysis of the compound having the formula (103) and having the empirical formula C₃₄H₄₉MnN₂O₄. 1.0 acetic acid gives:

Req.% C 65.05; H 7.97; N 4.21; Mn 8.27.

Found % C 64.3; H 8.1; N 4.2; Mn 8.44.

Example 3

Using the procedure described in Example 1 but with appropriate modification of the salicylaldehyde starting material

and the salt formation step, the compound of formula:

is obtained as a red brown product in a yield of 63% of theory.

10 Elemental analysis of the compound having the formula (104) and having the empirical formula $C_{24}H_{32}ClMnN_4O_2$.
0.75 H_2O gives:

Req.% C 56.41; H 6.55; N 10.96; Cl 6.94; Mn 10.76.
15 Found % C 56.5; H 6.6; N 10.9; Cl 6.8; Mn 9.9.

Example 4

20 Using the procedure described in Example 1 but with appropriate modification of the salicylaldehyde starting material, the compound of formula:

30 is obtained as a red product in a yield of 61% of theory.
Elemental analysis of the compound having the formula (105) and having the empirical formula $C_{30}H_{47}MnN_4O_{12}S_2$.
2.5 H_2O gives:

Req.% C 43.90; H 6.34; N 6.83; S 7.80; Mn 6.70.
35 Found % C 44.20; H 6.7; N 6.6; S 7.1; Mn 5.71.

Example 5

40 60g of ethylenediamine are dropped into a solution of 277g of salicylaldehyde in 500ml of ethanol over 1 hour at
60°C. Stirring is continued at 60°C. for a further 2 hours and the precipitate so formed is filtered off. There are obtained
260g of a yellow compound having the formula:

corresponding to a yield of 97% of theory.

50 16 g. of this compound are dissolved in 500 mls. of ethanol and treated with 11.9 g. of manganese-II-chloride. $4H_2O$ and with 11.9 g. of potassium hexafluorophosphate. The solution is stirred for 20 minutes at 25°C., then cooled to 5°C. and treated with a mixture of 12 mls. of 30% caustic soda solution, 6.8 mls. of a 30% hydrogen peroxide solution and 300 mls. of water. The pH of the solution is adjusted to 8-9 using 2N H_2SO_4 and filtered. After concentration of the filtrate, 8 g. of a brown-violet crystalline product of formula (107) are obtained, corresponding to a yield of 32% of theory:

15 Elemental analysis of the compound having the formula (107) and having the empirical formula C₃₂H₂₈F₁₂Mn₂N₄O₅P₂ gives:

Req.% C 40.53; H 2.99; N 5.91; F 24.04; Mn 11.59.

20 Found % C 40.8; H 3.3; N 6.0; F 22.3; Mn 11.1.

Example 6

The compound of formula (106) described in Example 5 is dissolved in tetrahydrofuran solvent and hydrogenated at 25°C. and under normal pressure in the presence of a 5% Pd/C catalyst. The compound of the following formula is obtained in 86% of the theoretical yield:

Using the procedure described in Example 1, the compound (108) is converted into the dark brown compound having the following formula in a yield of 12% of the theoretical yield:

Elemental analysis of the compound having the formula (109) and having the empirical formula C₁₆H₁₈ClMnN₂O₂·1.5 H₂O. 0.33 compound (108) gives:

Req.% C 53.53; H 5.16; N 7.81; Cl 7.43; Mn 11.53.

Found % C 53.1; H 5.6; N 7.4; Cl 7.8; Mn 11.7.

Example 7

Using the procedure described in Example 1, the following compound of formula (110) is obtained:

10 Elemental analysis of the compound having the formula (110) and having the empirical formula C₁₆H₁₄ClMnN₂O₂.
1.92 H₂O gives:

Req.% C 49.11; H 4.60; N 7.16; Cl 9.06; Mn 14.04.

Found % C 49.4; H 4.6; N 7.1; Cl 8.9; Mn 13.9.

15 Example 8

To 26.8g of the compound of formula (106), as described in Example 5, dissolved in 450ml of water there are added 24.5 g of manganese-(II)-acetate.4H₂O and 26.2 g of 30% caustic soda solution. The dark brown solution so produced
20 is stirred at 70°C. for 2 hours and then cooled to 5°C. The precipitated dark brown product is filtered off and dried in vacuum. There are obtained 25 g of the compound having the formula (111) (92 % of theory):

30 Elemental analysis of the compound having the formula (111) and having the empirical formula C₁₆H₁₃MnN₂Na₂O₉S₂.1.0H₂O gives:

Req.% C 34.2; H 3.03; N 5.0; Mn 9.8.

35 Found % C 34.2; H 3.3; N 5.6; Mn 9.3.

Example 9

40 Using the procedure described in Example 1, the following compound of formula (112) is prepared:

50 Elemental analysis of the compound having the formula (112) and having the empirical formula C₁₈H₁₇MnN₂O₄ gives:

55 Req.% C 56.8; H 4.5; N 7.4; Mn 14.5.

Found % C 56.7; H 4.6; N 7.3; Mn 14.6.

Example 10

Using the procedure described in Example 1, the following compound of formula (113) is prepared:

Elemental analysis of the compound having the formula (113) and having the empirical formula $C_{16}H_{14}F_6MnN_2O_2P$.
2.12H₂O gives:

15 Req.% C 38.1; H 3.6; N 5.6; H₂O 7.6; Mn 10.9.

Found % C 38.5; H 3.5; N 5.7; H₂O 7.6; Mn 11.0.

Example 11

Using the procedure described in Example 1, the following compound of formula (114) is prepared:

35 Elemental analysis of the compound having the formula (114) and having the empirical formula $C_{22}H_{23}MnN_2O_4$.1.9H₂O gives:

Req.% C 56.4; H 5.8; N 6.0; H₂O 7.3; Mn 11.7.

40 Found % C 56.2; H 5.8; N 5.9; H₂O 7.3; Mn 11.5.

Example 12

Using the procedure described in Example 1, the following compound of formula (115) is prepared:

55 Elemental analysis of the compound having the formula (115) having the empirical formula $C_{18}H_{18}ClMnN_2O_4$ gives:

Req.% C 56.2; H 4.7; N 7.3; Mn 17.3.

Found % C 56.3; H 4.6; N 7.1; Mn 17.1.

Example 13

Using the procedure described in Example 1, the following compound of formula (116) is prepared:

Elemental analysis of the compound having the formula (116) having the empirical formula $C_{20}H_{22}ClMnN_2O_2 \cdot 4.25 H_2O \cdot 0.33 NaCl$ gives:

Req % C 49.1; H 5.8; N 5.72; Cl 9.45; Mn 11.23.

15 Found % C 49.1; H 5.9; N 5.6; Cl 9.8; Mn 10.8.

Example 14

20 Using the procedure described in Example 1, the following compound of formula (117) is prepared:

30 Elemental analysis of the compound having the formula (117) having the empirical formula $C_{16}H_{12}ClMnN_2Na_2O_8S_2 \cdot 3H_2O \cdot 1.2NaCl$ gives:

Req.% C 28.0; H 2.6; N 4.1; Mn 8.0; S 9.3.

35 Found % C 28.0; H 2.6; N 4.1; Mn 7.8; S 9.1.

Example 15

Using the procedure described in Example 1, the following compound of formula (118) is prepared:

50 Elemental analysis of the compound having the formula (118) and having the empirical formula $C_{17}H_{15}MnN_2Na_2O_9S_2$ gives:

Req.% C 34.0; H 2.7; N 5.0; Mn 9.9; S 11.5.

Found % C 34.8; H 3.3; N 5.0; Mn 10.1; S 11.2.

Example 16

Using the procedure described in Example 1, the following compound of formula (119) is prepared:

Elemental analysis of the compound having the formula (119) and having the empirical formula $C_{22}H_{21}MnN_2Na_2O_{10}S_2 \cdot 1.56H_2O$ gives:

15 Req.% C 39.6; H 3.6; N 4.2; Mn 8.2; S 9.6.

Found % C 39.6; H 4.2; N 4.9; Mn 8.7; S 9.6.

20 Example 17

Using the procedure described in Example 1, the following compound of formula (120) is prepared:

35 Elemental analysis of the compound having the formula (120) having the empirical formula $C_{20}H_{18}ClMnN_2Na_2O_8S_2 \cdot 2.5H_2O$. $1.45NaCl$ gives:

Req.% C 32.2; H 3.1; N 3.8; Mn 7.4.

40 Found % C 32.2; H 3.1; N 3.8; Mn 7.2.

Example 1E

A) To a solution of 18.8 g. of 2-aminopyridine in 300 ml. of ethanol, there are added 24.4 g. of salicylaldehyde. The mixture is heated to 70-75°C. and stirred for 7 hours. The mixture is concentrated to one third of its volume and then cooled to 5°C., whereupon an orange product having the formula:

crystallised out. The product is filtered off with suction and allowed to dry in the air, giving a yield of 25.5 g. (65% of theory).

Elemental analysis of the compound having the formula (121a) having the empirical formula $C_{12}H_{10}N_2O$ gives:

10 Req.% C 72.71; H 5.08; N 14.13.

Found % C 72.6; H 5.1; N 14.1.

15 B) To a solution of 5.9 g. of the compound of formula (121a) obtained in Part A), in 200 ml. of ethanol, there are added 8.5 g. of manganese-III-acetate dihydrate. The resulting dark brown solution is stirred for 5 hours at 60-65°C. and evaporated to dryness. The residue is dried in vacuum giving a yield of 6.3 g. (68% of theory) of a light brown compound having the formula (121).

20 Elemental analysis of the compound having the formula (121) having the empirical formula $C_{14}H_{12}MnN_2O_3 \cdot CH_3COOH$ gives:

Req.% C 49.48; H 4.38; N 7.22; Mn 14.17.

Found % C 50.18; H 4.45; N 7.40; Mn 14.4.

25 Example 19

A) To a solution of 26.8 g. phthalaldialdehyde in 1000 ml. of ethanol there are added 21.5 ml. of diethylenetriamine and the mixture is stirred for 20 hours at 25°C. The resulting solution becomes brown-green in colour and is evaporated to dryness giving 40 g. (100% theory) of a thick brown liquid having the formula:

50 B) To a solution of 19.8 g. of manganese-II-chloride tetrahydrate in 250 ml. of ethanol, there is added a solution of 20.1 g. of the product of formula (122a) in 250 ml. of ethanol. An ochre yellow suspension is formed and this is stirred for 18 hours at 25°C. The product is filtered off with suction, washed with ethanol and dried in vacuum at 25°C. giving 28 g. (85% theory) of an ochre yellow of formula (122).

55 Elemental analysis of the compound having the formula (122) and having the empirical formula $C_{12}H_{14}Cl_2MnN_3$ gives:

Req.% C 37.81; H 5.55; N 11.02; Cl 18.60; Mn 14.41.

Found % C 38.0; H 5.0; N 10.5; Cl 19; Mn 15.4.

Example 20

5

10

3 Mn(CH₃COO)₂ . 2

(123)

15

To a solution of 5.1 g. of 2,2'-dipyridylamine in 50 ml. of ethanol there are added 7.4 g. of manganese-II-acetate tetrahydrate and the mixture is stirred for 18 hours at 25°C. The product is filtered off with suction, washed with methanol and dried in vacuum at 25°C. giving 6.6 g. (58% theory) of a white product having the formula (123).
Elemental analysis of the compound having the formula (123) having the empirical formula C₃₂H₃₆Mn₃N₆O₁₂ gives:

Req.% C 44.62; H 4.21; N 9.76; Mn 19.13.

25 Found % C 44.70; H 4.15; N 9.72; Mn 19.8.

Example 21

30

35

40

(124)

8.2 g. of 1,2-bis(3,5-di-tert.butylsalicylidamino)cyclohexane are added to 400 ml. of ethanol, the mixture is heated to 65°C. and 3.7 g. of manganese-II-acetate tetrahydrate are added to the yellow suspension. After a short time, a dark brown solution is formed which is stirred for 15 hours and then evaporated to dryness. 9.5 g. (92.8% theory) of a dark brown powder having the formula (124) are obtained.

45 Elemental analysis of the compound having the formula (124) having the empirical formula C₃₈H₅₅MnN₂O₄. 1.33 H₂O gives:

Req.% C 66.85; H 8.43; N 4.10; Mn 8.05.

50 Found % C 66.98; H 8.53; N 4.00; Mn 7.82.

Example 22

55

10.9 g. of o-aminophenol and 10.7 g. of pyridine-2-aldehyde are stirred in 200 ml. of ethanol for 5 hours at 60-65°C. The solution is then treated with 24.5 g. of manganese-II-acetate tetrahydrate and stirred for 5 hours at 60-65°C. The solution is evaporated and the residue is dried in vacuum giving 31 g. (95% theory) of a red-brown product having the formula (125).

15 Elemental analysis of the compound having the formula (125) and having the empirical formula $C_{14}H_{12}MnN_2O_3 \cdot 0.83 H_2O$ gives:

15 Req % C 51.58; H 4.22; N 8.59; Mn 16.87.

Found % C 51.76; H 3.91; N 8.11; Mn 16.80.

20 Example 23

30 A) To a solution of 405 ml. of diaminooethane in 1000 ml. of toluene there are added 20 ml. of formic acid and 63.4 g. of copper dust. The suspension is heated to 100°C. and is treated, dropwise, over 2 hours, with a solution of 111 ml. of o-chlorobenzaldehyde in 115 ml. of toluene. After 4 hours at 100°C., the mixture is cooled to 75°C. and some copper dust is filtered off.

35 The filtrate forms two phases. The upper toluene phase is separated and concentrated to 100 ml. This concentrate is diluted with 200 ml. of ethanol and allowed to stand for 48 hours at 25°C. The product which crystallises out is filtered with suction and dried in vacuum at 40°C. giving 24 g. (16% theory) of a yellow product having the formula:

45 B) 5.8 g. of the compound of formula (126a) obtained in Part A) and 5 g. of manganese-II-acetate tetrahydrate are stirred for 12 hours in 200 ml. of ethanol, filtered with suction, washed with ethanol and dried in vacuum, giving 7.5 g. of the compound of formula (126).

50 Elemental analysis of the compound having the formula (126) having the empirical formula $C_{22}H_{26}MnN_4O_4 \cdot 0.14 MnO_2$ gives:

55 Req % C 55.30; H 5.48; N 11.72; Mn 13.12.

Found % C 55.34; H 5.55; N 11.80; Mn 12.70.

Example 24

5

To a solution of 19.8 g. of manganese-II-chloride in 200 ml. of methanol there are added 14 g. of hexamethylene-tetramine. After stirring at 25°C. for 20 hours, the precipitated product is filtered with suction and dried in vacuum at 25°C., giving 18.5 g. (91% theory) of a light grey product having the formula (127).

Elemental analysis of the compound having the formula (127) and having the empirical formula $C_{12}H_{24}Cl_2MnN_8 \cdot 2H_2O$ gives:

15 Req.% C 32.59; H 6.38; N 25.34; Cl 16.03; Mn 12.42.

Found % C 32.2; H 6.5; N 24.8; Cl 16.2; Mn 12.4.

Example 25
20

25

30

To a solution of 3 g. of triazacyclononane in 80 ml. of methanol there are added 2 g. of manganese perchlorate hexahydrate. A white suspension is formed immediately. After 30 minutes, 1 g. of sodium acetate is added and the mixture is stirred for 24 hours at 25°C. The product is filtered with suction, washed with methanol and dried in vacuum at 25°C., giving 1.8 g. (65% theory) of a white product having the formula (128).

35 Elemental analysis of the compound having the formula (128) and having the empirical formula $C_{12}H_{30}Cl_2MnN_6O_8$ gives:

Req.% C 28.12; H 5.86; N 16.41; Cl 13.87; Mn 10.74.

40 Found % C 28.1; H 6.2; N 16.3; Cl 13.6; Mn 11.0.

Example 26

45

50

55

To a solution of 13.8 g. of phthalocyanine tetrasulphonic acid in 140 ml. of water there are added 4.2 g. of manganese-III-acetate dihydrate. The mixture is heated to 70-75°C. and stirred for 12 hours. 20 g. of sodium chloride are added, the mixture is stirred for a further 6 hours, cooled to 5°C. and filtered with suction. The material filtered off is dissolved in 200 ml. of water and dialysed for 40 hours. The solution remaining is evaporated to dryness and the residue is dried in vacuum, giving 3.5 g. (20% theory) of a black product having the formula (129).

Elemental analysis of the compound having the formula (129) having the empirical formula C₆₄H₄₀Mn₃N₁₆O₂₄S₈.2.2 H₂O gives:

Req. % C 31.78; H 3.50; N 9.27; S 10.61; Mn 6.81.

Found % C 32.1; H 3.2; N 9.4; S 10.7; Mn 6.79.

Example 27

A standard (ECE) washing powder is made up from the following components in the indicated proportions:

- 35 8.0% Sodium (C_{11.5})alkylbenzenesulphonate;
- 2.9% Tallow-alcohol-tetradecane-ethyleneglycolether (14 moles EO);
- 3.5% Sodium soap;
- 40 43.8% Sodium tripophosphate;
- 7.5% Sodium silicate;
- 45 1.9% Magnesium silicate;
- 1.2% Carboxymethylcellulose;
- 0.2% EDTA;
- 50 21.2% Sodium sulphate; and
- 9.8% Water.

An aqueous wash liquid is then made up and contains 7.5 g/l of the ECE powder, 1.13 g/l of sodium perborate monohydrate and 0.015 g/l of the compound of formula (111) as described in Example 8.

Into 400 ml of the aqueous wash liquid (made up using town water of 12 degrees of hardness), there are placed 12.5 g. of test cotton fabric soiled with red wine, tea, coffee or blackberry stains, as well 37.5 g. of bleached cotton (i.e.

giving a liquor ratio of 1:8).

The respective wash baths are each heated from 15°C. to the test temperature of 25°C., 40°C. or 60°C. over a period of 10 minutes; and held at the respective test temperature for a further 10 minutes. The respective swatches are then rinsed under flowing, cold town water, spun dry and ironed.

5 The brightness value (Y) of the respective test swatches is then determined using an ICS SF 500 spectrophotometer. The value Y provides a measure of the level of bleach effect achieved. A difference of 1 Y unit is clearly detectable visually.

For reference purposes, the respective Y values are determined for each of the washed goods at 25°C. using perborate alone (i.e. using no compound of formula 109).

10 The results obtained are set out in the following Table.

10

Table

Soil Type	ΔY						
	15% perborate			15% perborate + 0.2% cpd. 110			
	25°C.	40°C.	60°C.	25°C.	40°C.	60°C.	
15	red wine	Y=64	+1	+3	+4	+6	+14
	tea	Y=65	0	+5	+4	+10	+22
	coffee	Y=72	+1	+5	+4	+6	+14
	blackberry	Y=60	+2	+7	+7	+10	+23

15 It is clear from the results in the Table that, at any given temperature, the bleaching improvement achieved with a fabric bleaching composition according to the invention are 3 to 5 times greater than those achieved using perborate alone. Moreover, even at 25°C., a fabric bleaching composition according to the invention provides bleaching effects which are equivalent to those obtained at 60°C. using perborate alone.

20 Similar results are obtained when the compound of formula (111) is replaced by a compound of formula (110), (112), (114), (117), (118), (119), (120), (121), (122), (123), (124), (125), (126), (128) or (129).

30

Claims

1. A fabric bleaching composition comprising
 - a) a peroxy compound; and
 - b) 0.0005 to 0.5%, by weight of manganese, of one or more water-soluble manganese complexes having one of the formulae (1), (2), (3), (4), (5), (6), (7) (8), (9), (10), (11), (12), (13), (14), (15), (16), (17) or (18):

in which R₁, R₂, R₃ and R₄ are the same or different and each is hydrogen or optionally substituted alkyl, cycloalkyl or aryl; R₅ is hydrogen, optionally substituted alkyl, optionally substituted alkoxy, halogen, cyano, N(optionally substituted alkyl)₂, N[⊕](optionally substituted alkyl)₃ or a water-solubilising group; R₆ and R₇ are the same or different and each is NH-CO-NH₂, a group of formula

35

or a group of formula

40

Y is optionally substituted alkylene or cyclohexylene; X is OH, NH₂, optionally substituted alkyl or optionally substituted aryl; n is 0, 1, 2 or 3; M is hydrogen, an alkali metal atom, ammonium or a cation formed from an amine; m is 2 or 3; q is 0, 1, 2 or 3; and A is an anion.

45

2. A composition according to claim 1 comprising

50

a) a peroxy compound; and

b) 0.005 to 0.05%, by weight of manganese, of one or more water-soluble manganese complexes having one of the formulae (1) to (18).

55

3. A composition according to claim 1 or 2 in which a water solubilising group R₅ is SO₃M in which M is defined in claim 1.

55

4. A composition according to any of the preceding claims in which a complex of formula (1) is present in which each R₁ is hydrogen, Y is an ethylene bridge, -CH₂CH₂-NH-CH₂CH₂- or -CH₂CH₂-N(CH₃)-CH₂CH₂- and n is 2.

5. A composition according to claim 4 in which one sulfo group is present in each benzene ring.

6. A composition according to claim 5 in which the sulfo group is in para position to the oxygen atom.
7. A composition according to any of claims 1 to 3 in which a complex of formula (2) is present in which R₂ is hydrogen and X is OH.
- 5 8. A composition according to any of claims 1 to 3 in which a complex of formula (3) is present in which R₃ is hydrogen and R₄ is hydrogen, methyl or phenyl.
9. A composition according to claim 8 in which each SO₃M group is in para position to the respective oxygen atom.
- 10 10. A composition according to any of claims 1 to 3 in which a complex of formula (4) is present in which R₁ is hydrogen.
11. A composition according to claim 10 in which each SO₃M group is in para position to the respective oxygen atom.
- 15 12. A composition according to any of claims 1 to 3 in which a complex of formula (5), (6), (7) or (8) is present in which R₁ is hydrogen or methyl, q is 1, R₅ is hydrogen, methyl or SO₃Na, Y is -CH₂CH₂- or cyclohexylene and A is a chloride, chlorate, acetate, hydroxy, methoxy or PF₆ anion.
13. A composition according to claim 12 in which each SO₃Na group is in para position to the respective oxygen atom.
- 20 14. A composition according to any of claims 1 to 3 in which a complex of formula (9) is present in which R₆ and R₇ are the same and A, when present, is acetate.
- 15 15. A composition according to any of claims 1 to 3 in which a compound of formula (11) or (12) is used in which R₁ is hydrogen, n is 0 and A is acetate.
- 25 16. A composition according to any of claims 1 to 3 in which a compound of formula (13) is used in which R₁ is hydrogen, m is 2 or 3 and A is acetate.
- 30 17. A composition according to any of claims 1 to 3 in which a compound of formula (14) is used in which R₁ is hydrogen, m is 2 and A is chloride.
18. A composition according to any of claims 1 to 3 in which a compound of formula (15) is used in which m is 2 and A is chloride.
- 35 35 19. A composition according to any of claims 1 to 3 in which a compound of formula (16) is used in which m is 2 and A is acetate.
20. A composition according to any of claims 1 to 3 in which a compound of formula (17) is used in which A is perchlorate.
- 40 40 21. A composition according to any of the preceding claims in which the peroxy component a) is hydrogen peroxide, a compound which liberates hydrogen peroxide, a peroxyacid, a peroxyacid bleach precursor or a mixture thereof.
22. A composition according to claim 21 in which the compound which liberates hydrogen peroxide is an alkali metal peroxide, -perborate, -percarbonate, -perphosphate or -persulfate; peroxyalauric acid, peroxybenzoic acid, diperoxysophthalic acid, 1,12-diperoxydodecanedioic acid or urea peroxide; or a mixture thereof.
- 45 50 23. A composition according to claim 22 in which the compound which liberates hydrogen peroxide is sodium percarbonate or sodium perborate.
24. A composition according to claim 21 in which the peroxyacid bleach precursor is a benz(4H)-1,3-oxazin-4-one derivative 2-(N,N,N-trimethyl ammonium) ethyl sodium-4-sulfophenyl carbonate chloride (SPCC) N-octyl,N,N-dimethyl-N10-carbophenoxy decyl ammonium chloride (ODC) 3-(N,N,N-trimethyl ammonium) propyl sodium 4-sulfophenyl carboxylate N,N,N-trimethyl ammonium toluyloxy benzene sulfonate sodium-4-benzoyloxy benzene sulfonate (SBOBS) N,N,N',N'-tetraacetyl ethylene diamine (TAED) sodium-1-methyl-2-benzoyloxy benzene-4-sulfonate sodium-4-methyl-3-benzoyloxy benzoate and sodium nonanoyloxybenzene sulfonate (NOBS).
- 55 25. A composition according to claim 24 in which the peroxyacid bleach precursor is a substituted 2-phenyl-benz(4H)

-1,3-oxazin-4-one, sodium nonanoyloxybenzene sulfonate or N,N,N',N'-tetraacetyl ethylene diamine.

- 26. A composition according to any of the preceding claims 21 in which the amount of the peroxy compound is 0.5 to 50% by weight, based on the total weight of the composition.
- 5 27. A composition according to claim 26 in which the amount of the peroxy compound is 2 to 20% by weight, based on the total weight of the composition.
- 10 28. A composition according to any of the preceding claims which also comprises a surfactant and a detergent builder.
- 29. A composition according to claim 28 comprising 5-50% of an anionic surfactant and/or a nonionic surfactant.
- 30. A composition according to claim 29 comprising 5-25% of an anionic surfactant and/or a nonionic surfactant.
- 15 31. A composition according to claim 29 or 30 in which the anionic surfactant is a sulfate, sulfonate or carboxylate surfactant, or a mixture thereof.
- 32. A composition according to claim 29 or 30 in which the nonionic surfactant is a condensate of ethylene oxide with a C₉-C₁₅ primary alcohol having 3-8 moles of ethylene oxide per mole.
- 20 33. A composition according to claim 28 comprising 5-80% of a detergent builder.
- 34. A composition according to claim 33 comprising 10-60% of a detergent builder.
- 25 35. A composition according to claim 33 or 34 in which the detergent builder is an alkali metal phosphate; a carbonate or bicarbonate; a silicate; an aluminosilicate; a polycarboxylate; a polycarboxylic acid; an organic phosphonate; an aminoalkylene poly (alkylene phosphonate); or a mixture of these.
- 30 36. A composition according to any of the preceding claims in which a protease, cellulase, lipase, oxidase or amylase enzyme is present.
- 37. A composition according to any of the preceding claims which is in powder or granulate form.
- 38. A composition according to any of claims 1 to 36 which is in liquid form and contains 0-5% water.
- 35 39. A composition according to claim 38 which is in liquid form and contains 0-1% water.
- 40. A process for the production of a composition as claimed in claim 31 in which the components are mixed in dry form.
- 41. A process for the production of a composition as claimed in claim 37 in which a base powder is produced by spray-drying an aqueous slurry which contains all the components, apart from the components a) and b); then adding the components a) and b) by dry-blending them into the base powder.
- 42. A process for the production of a composition as claimed in claim 37 in which the component b) is added to an aqueous slurry containing the surfactant and builder components, followed by spray-drying the slurry prior to dry-blending component a) into the mixture.
- 43. A process for the production of a composition as claimed in claim 37 in which a nonionic surfactant component is not present, or is only partly present in an aqueous slurry containing anionic surfactant and builder components; component b) is incorporated into the nonionic surfactant component, which is then added to the spray-dried base powder; and finally component a) is dry-blended into the mixture.
- 44. A bleaching and/or cleaning process comprising contacting a fabric to be bleached and/or cleaned with an effective amount of a fabric bleaching composition according to any of claims 1 to 39.
- 55 45. A process according to claim 44 in which the amount of the fabric bleaching composition used is such that the amount of manganese complex b) provides from 0.001 to 100 ppm of manganese in the bleaching and/or cleaning bath.

46. A process according to claim 45 in which the amount of the fabric bleaching composition used is such that the amount of manganese complex b) provides from 0.01 to 20 ppm of manganese in the bleaching and/or cleaning bath.

47. A compound having one of the formulae:

5

10

15

20

25

30

35

40

45

 $2A^-$

(7)

50

55

in which R₁, R₅, m, n, q and A are as defined in claim 1, provided that in the compounds of formula (5), q is 2 or 3.
